

Kestrel Medical Imaging — Financing Inquiry

Broker submission via email — SAMPLE / SYNTHETIC DATA FOR TESTING

Client is Kestrel Medical Imaging Partners, an outpatient imaging operator founded in 2012. They're looking to finance two new 3T MRI systems, total cost roughly \$6.2M, and can put 10% down (\$620K). They want a fair market value lease over 7 years. Vendor quotes useful life on these systems at 12 years.

Financials (per CFO, unaudited): revenue last year came in at \$31.4M vs \$29.8M the year prior. EBITDA approx \$6.8M (prior year \$6.1M). Existing debt load is about \$12.5M across two term loans; they didn't provide debt service but mentioned roughly \$1.9M/yr. Balance sheet shows \$2.2M cash.

Note: the MRI systems are core to the business — imaging IS the revenue. Strong operator in a stable healthcare niche, described by their bank as a solid middle-market credit.
